Technical Note: Archive to usb

The SitePoint application can be used to take footage from a unit and make an archive on a hard drive or usb stick . The archive folder will contain the software required to view the footage on a Windows PC or laptop at a later date.

If there is a substantial amount of footage to transfer, it is recommended that a site visit is made to directly connect the unit and the laptop running the SitePoint application as transfers can take a large amount of time and bandwidth to complete

To copy footage to a hard drive or usb stick:

1. Connect to the site with SitePoint and select the review screen
2. Use the date picker the select the start time then click [Mark1]
3. Use the date picker the select the end time then click [Mark2], the date time turns cyan
4. Right-click the camera image to show a pop-up menu and select 'Archive-> Transfer **footage** to local drive'
5. Enter a suitable name for this archive and click [OK]. Avoid using '/' or '\' characters in the name.
6. Choose a location on your PC to save the archive to, this can be a folder on a usb storage device. It is advisable to create a new folder in a well-known location.
7. Click [Save], the archive is transferred to your PC.
8. Once complete, open the folder you chose and run 'ArchiveViewer.exe' with the Teleprecision icon to view your archive.

If you wish to make a safety copy of the footage on the unit to ensure it is not overwritten, choose 'Archive->New Archive' at step 4 and follow the usual archive creation procedure. You can choose 'Archive->Transfer **archive** to local drive' to transfer this safety copy to your PC in future.
