

Audio Announcement On Alarm

Overview

The Audio Upgrade add-on module allows the Site Sentinel range of DVR Image transmitters to play a pre-recorded audio sample when an intrusion is detected. Each sensor can be configured to play a separate audio sample and a minimum time between announcements can be individually specified.

Format

The audio clip should be recorded in a .wav file using the GSM6.10 codec. The Windows Sound Recorder application can be used to produce this format, take care to select the correct codec when saving. If 'GSM6.10' is not shown in the orange-highlighted area click the 'Change' button as shown:

Delivery

Using the Remote Administration Tool, select 'Advanced' from the 'View' menu, then connect to the unit. Click 'Remote Controller' found at the top of the left-hand pane then select the 'Files and Executables' tab on the right.

Click the 'Send to site' button and select your audio file, after a few seconds your file will be transferred to the unit. It may be necessary to click 'Refresh Info' for it to appear in the table.

Highlight your audio file in the table by clicking its name, and then click the 'Activate' button to register it:

The image displays two screenshots of the Remote Administration Tool (RAT) interface. The left screenshot shows the 'View' menu with 'Advanced' selected. The right screenshot shows the 'Files & Executables' tab with a table of software details and the 'Send to site' and 'Activate' buttons highlighted.

Configuration

Click the 'Alarm Channels' section in the left pane and select the detector to configure from the drop-down selector on the right. Click the 'Announcements' tab to show the audio details.

Enter the audio filename (including the .wav suffix) in the 'Announcement on alarm' section. Use the 'Time between announcements' section to specify the minimum interval in seconds. This interval governs audio generated by activity on this detector alone, other detectors will act independently.

Repeat for the other detectors then click 'Apply' to put these changes into effect. A walk-test can now be carried out to verify correct operation.
