## Technical Note: Timed Events

The 'Timed Event' facility can be used to arm and disarm a Teleprecision unit at specific times without operator intervention.

- Run the Remote Administration Tool
- Select 'Manufacturer' from the View menu to show the advanced settings
- Connect to the site unit
- Click the 'Timed Events' section in the left pane
- Add a new event, overtype a suitable name and click [Rename] e.g. 'WeekdayArm'
- Enter the corresponding action e.g. 'ZoneArm1' or 'ZoneDisarm1', tick 'active' to activate, enter the time in 24 hour format (hh:mm) e.g. '07:30' and tick the appropriate days to suit. The screenshots below show examples.
- Click Apply, your changes will take effect

Use the number following 'ZoneArm' or 'ZoneDisarm' to select which zone to arm or disarm. This number corresponds to the zone number shown at the top of the ArcLite detectors screen.

For more extensive sites, it is possible to assign detectors to different zones or groups to allow sections of a site to become armed at different times, for example, a rear compound could be armed at close of business but the car park could be armed later to allow for later office working or ancillary staff access etc.

To arm at different times on particular days, add additional events to run on just those days. The unit's time must of course be set correctly for accurate operation of timed events.

Note: Timed events are not applied retrospectively. If the unit is switched off at the time of the event, it will start up in the same arm/disarm state it was in before shutdown.
